Civil Engineer & Architect

About

Civil Engineer & Architect, specialized in risk management, urban resilience, and post-crisis reconstruction. I develop a multidisciplinary approach combining architecture and engineering, uniting design, diagnosis, and vulnerability-reduction strategies in the face of natural hazards and climate change.

Education

ENSA Paris-Belleville — Sep 2024 - Jul 2026, Paris, France
Specialization in Architecture and Major Risks (DSA)

UMons Faculty of Engineering — Sep 2022 - Aug 2024, Mons, Belgium
Double degree in Civil Engineering and Architecture

IMT Nord Europe — Sep 2020 - Aug 2024, Douai, France
Engineering degree - General Engineering
Specialization in Materials and Structures

CPGE Lycée Lavoisier — Sep 2018 - Jun 2020, Paris, France
Preparatory Classes for the Engineering school : PCSI/PC

Fintona Girls' School — Jul 2016, Melbourne, Australia

Experience

OCHA - Emergency Response Section — Oct 2025 - Mar 2026, Geneva, Switzerland
Humanitarian Affairs Intern - OCHA (United Nations).

Assistance to the Emergency Response Section (ERS) in coordinating humanitarian responses to disasters and crises :

- Support to the rapid deployment of personnel, experts, and logistical resources.
- Compilation and dissemination of operational guidelines and capacity-building for humanitarian actors.
- Management of expert networks and rosters (UNDAC, INSARAG) and promotion of international response standards.
- Collaboration with partners to strengthen national and international preparedness and response capacities.

Informal Habitat and Risk Management Study — Sep 2025 - Feb 2026, Hamjago, Mayotte
Within the DSA Architecture & Major Risks program.

Field study focusing on informal housing, social and environmental diagnostics, and exposure to natural hazards. The project analyzed the impacts of cyclone Chido and proposed strategies for habitat upgrading and territorial resilience. The work emphasized community-based approaches to risk reduction and strengthened my interest in post-crisis reconstruction and sustainable territorial planning.

Territorial Project - La Boquilla — Fev 2025 - Jul 2025, Cartagena, Colombia
Within the DSA Architecture & Major Risks program.

Participatory diagnosis and resilience strategy against flooding for an Afro-descendant neighborhood exposed to rising waters. Development of a hybrid stilt-house housing model rooted in local re-vegetation, reconciling continuity of living with climate adaptation.

Seismic Rehabilitation and Heritage Enhancement Project — Sep 2024 - Jan 2025, Apice, Italia
Within the DSA Architecture & Major Risks program.

Project for the enhancement of viticultural heritage and post-crisis reconstruction, integrating seismic devices while preserving remarkable architectural elements.
The proposal includes a territorial network of vineyards punctuated by programmatic hubs linking Apice Vecchio and Apice Nuovo, reinforcing landscape and cultural continuity while promoting building and territorial resilience.

Skills

AutoCad
Adobe suite: Ps, Ai, Id
Archicad
Robot & Revit
SolidWorks
Sketchup
Rhino
Coding : Python & Java
MS Word, Excel, Powerpoint
KoboToolbox
QGIS
Photo & Video Editing
Film photography

French	Native
English	Fluent
Spanish	Basic / Academic

Research Master Thesis - Biopolymers as green binding agent of civil matrix

Mar 2024 - Aug 2024
Melbourne, Australia

Final-year research project at Swinburne University of Technology

Experimental research on the use of biopolymers (casein and xanthan gum) as sustainable alternatives to cement for soil reinforcement. Comparative study of mechanical performance and durability of bio-stabilized mixtures.

Project Rehmok 2

Sep 2023 - Jun 2024
Kinshasa, DR Congo

Within the Master's at Faculté Polytechnique de Mons.

Phase 2 of the project Rehabilitation of Red Cross housing in Mokamo Village, DR Congo.
Development cooperation micro-project between UMons and UNIKIN, funded by ARES and UMons (€23,000 budget).
Project planning and scheduling, budget management, materials study, bioclimatic design, and performance assessment of proposed earth-based construction.

Architect - H2o architects

Jul 2023 - Oct 2023
Melbourne, Australia

Architect Intern.

Participation in several design and rehabilitation projects at different scales.
Collaborated on the production of drawings, digital models, and graphic documents.
Approach focused on sustainability, energy efficiency, and contextual integration within the Australian urban environment.

Architect - Yesornot studio

Apr 2022 - Jul 2022
Paris, France

Architect Intern.

Participation in architectural and urban design projects with a sustainable and contextual approach.
Contributed to building permits, plans, modeling, and presentations at various project stages.

Maths, physics and chemistry tutoring

Since 2018
Paris, France

Provide personalised academic support to high school students in mathematics and physics-chemistry, strengthening analytical reasoning, communication, and teaching skills.

Complementary Training

Earth Construction Workshop

Sep 2025
Paris, France

CRAterre Training - Within the DSA Architecture & Major Risks program.

Supervised by a CRAterre engineer, one-week practical and theoretical initiation to earth construction techniques: adobe, compressed earth blocks, rammed earth, and earthen plasters.

"Shelter & Post-Disaster Reconstruction" Training

Sep 2025
Paris, France

IFRC Training - Within the DSA Architecture & Major Risks program.

One-week session led by the Head of Shelter Training at the International Federation of Red Cross and Red Crescent Societies. Integrated approach to humanitarian response and reconstruction: needs assessment, emergency shelter programming, and inter-agency coordination in post-disaster contexts (Haiti, Sri Lanka, Bangladesh, Vanuatu, etc.).
